No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents the mouse antibody 21.6 heavy chain variable region directed against leukocyte adhesion molecule VLA-4. Cloned CDNA sequences of mouse 21.6 VH and VL (see AAQ99889) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are Constant regions. In the humanizing human kappa or gamma-1 constant regions. In the humanized heavy chain, amino acids H27. Constant regions. In the humanized heavy chain, anino acids H27. Constant regions. In the humanized heavy chain, anino acids H27. Constant regions. In the humanized heavy chain, anino acids H27. Constant regions. In the humanized heavy chain, anino acids H27. Constant regions. In the humanized nework are replaced by the amino acid present in the equivalent position of the mouse CC 21.6 Ig H chain. Plasmids encoding the chimeric antibodies are considered into COS cells. The humanized antibodies can be used CC to inhibit adhesion of a leukocyte to an endothelial cell and CC to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, comeningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibodies antibo

dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermaitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The antibody may also be used in the affinity purification of alpha-4 integrin for use as a vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibodies of the invention have a half-life in the human circulation essentially
                                                                                                                                     This polypeptide comprises the heavy chain variable region (VH) of mouse anti-alpha-4 integrin monoclonal antibody 21.6. The complementarity determining regions (CDRs) of the 21.6 VH can be incorporated into a human 21/28 CL framework to produce a claimed humanised 21.6 VH (see AAW22413) and a claimed humanised 21.6 antibody that is used in the manufacture of a medicament for treating a disease selected from asthma, atherosclerosis, AIDS,

New humanised antibodies against VLA-4 - used for inhibiting felukocyte adhesion to endothelial cells, partic. for treating pr leukocyte adhesion to endothelial cells, partic. for treating pr leukocyte adhesion to endothelial cells, partic. for treating pr leukocyte adhesion to endothelial cells, partic. for treating pr leukocyte adhesion of sequence levels, cloned cDNA cDR sequences of constant framework regions of the REI antibody for the light chain and constant framework regions of the REI antibody for the light chain and constant framework regions of the REI antibody for the light chain and constant framework regions of the REI antibody for the light chain and constant fregions. In the humanized light chain, human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the humanized light chain, amino acids L45, L49, constant regions. In the equivalent position of the mouse 21.6 Ig light chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used for detecting VLA-4, for affinity purification or for generating cused for detecting VLA-4, for affinity purification or for generating anti-idiotype antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the variable heavy region of the chimaeric human/murine monoclonal antibody (MAb) ONS-M21. The MAb was prepd. by combining light and heavy variable region DNA, from a murine anti-human myeloblastoma cell MAb, with human light and heavy constant region sequences, respectively to produce chimaeric human/murine light and heavy chain DNA mols. A recombinant vector for the expression of the heavy and light chain DNA mols was prepd., and used to transform a host cell. The host cell was then cultured, and the expression prods. of the heavy and light chain DNA mols stranded Fv region. The reshaped Fv region has an agent for the diagnosis and treatment of cerebral tumours, e.g. myelphastoma.

The antibody can be to treat, prevent and diagnose FCV infection. It has a broad vineutralising spectrum and can be used to neutralise viruses which have acquired immunity to other neutralising antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Domain

                                                                                                                                                                                                                                                                                                                                                                   murine anti-human interleukin 5 receptor alpha chain (hIL-5R alpha) monoclonal antibody (MAb) KM1486. KM1486 is produced by the hybridoma FERM BP-5651, which was prepared by immunising Balb/c mice with hull-5R alpha, fusing spleen cells obtained from the mice with mouse myeloma 93-Ul cells and screening the resultant hybridomas. The MAb can be used to detect or assay for hIL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δõ
chain variable region against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VH (AAQ9889) and VL (AAQ9889) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5 and 3 ends of the mouse cDNAs are modified using PCR primers (AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized heavy chain, amino acids H27, H28, H29, H30, H44 nd H71 in the human HC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig H chain. Plasmids encoding the
                                                                                                                          The sequence represents the human reshaped antibody 21.6 heavy

The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can
                                                                                                                                                                                                                                                                                                                                                                               asthma; atherosclerosis; AIDS; dementia; diabetes; tumour; metastasis; inflammatory bowel disease; rheumatoid arthritis; transplant rejection; graft versus host disease; nephritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC This polypeptide, designated Ha, comprises the heavy chain variable CC region (VH) of a humanised alpha-4 integrin antibody 21.6 (see also CA AW22413). It is composed of complementarity determining regions from CC the VH region (see AAW22410) of mouse alpha-4 integrin monoclonal CC antibody 21.6 and a modified human 21/28/CL framework. It can be CC expressed in mammalian host cells following PCR amplification and CC mutagenesis of appropriate mouse and human DNA sequences. The CC mutagenesis of appropriate mouse and human DNA sequences. The CC mannised 21.6 VH and a humanised 21.6 VL (see AAW22412) can be used CC to produce a claimed humanised 21.6 VL (see AAW22412) can be used CC to produce a claimed humanised 21.6 vL vice AAW22412) can be used CC aritised 21.6 vL antibody that is useful in the CC mannised cure of a medicament for treating asthma, atherosclerosis, CC AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid CC aritists, transplant rejection, graft versus host disease, tumour CC metastasis, nephritis, atopic dermatitis, proriasis, myocardial CC ischaemia, and acute leukocyte mediated lung injury. The humanised CC antibody has a half-life in the human circulation essentially

The antibody is used to construct humanized immunoglobulins, which comprise an antigen binding region of non-human origin and a portion of a human immunoglobulin. The humanized immunoglobulins are useful for treating autoimmune diseases, infectious diseases, inflammatory disorders, systemic lupus erythematorys, diabetes mellitus, insultis, asthma, arthritis, inflammatory bowel disease, inflammatory dermatitis, and multiple sclerosis. The immunoglobulins are also useful for treating a transplant recipient or preventing transplant rejection in a transplant recipient, and treating proliferative disease (leukemia, lymphoma and cancer), anaemia (sickle-cell anaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        systemic lupus erythematosus; diabetes mellitus; insulitis; asthma; arthritis; inflammatory bowel disease; cancer; inflammatory dermatitis; multiple sclerosis; transplant rejection; proliferative disease; leukemia; lymphoma; anaemia; sickle-cell anaemia; thalassemia;
                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents the heavy chain variable region of the murine antibody 1F1. The antibody has a binding specificity to B7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               aplastic anaemia; myeloid dysplasia syndrome.

                                                                                                                                                                                                                             CC AAR95946-R95948 represent sequences for variable regions of an antibody CC produced by the hybridoma cell line HNK-20. This sequence represents CC the sequence for the antibody HNK-20 variable heavy chain. HNK-20 is a CC murine hybridoma cell line, that produces IgA specific for the F CC quitranslated region, that produces IgA specific for the 5 CC untranslated region of the variable region, and for the intron CC containslated region of the variable region, and for the intron CC downstream of the rearranged J region (see AAT30459-T30545 for primer Sequences). The DNA encoding these sequences can be inserted into vectors CC sequences). The DNA encoding these sequences can be inserted into vectors CC containing heterologous (such as human) constant region genes, for the CC are useful in the treatment and diagnosis of infection by RSV, such as penumonia and bronchiolitis, in humans and animals. By using genomic DNA CC as a template, variable region genes can be isolated without producing CC fragments that have to be adapted for recombinant antibody expression. CC contain the target variable region is required. Chimeric antibodies conding the target variable region is required. Chimeric antibodies conding the target variable region is required. Chimeric antibodies conding the target variable region is required. Chimeric antibodies conding the target variable region is required. Chimeric antibodies conding the target variable region is required.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAR95948

The sequence encodes the mouse antibody 21.6 heavy chain variable region, Ha, directed against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VL and VH (AAQ99889 and AAQ99892) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L48, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used for inhibiting inflammator. Afocaco couch as mendothelial cell and
